Go Long EA Inputs:

<Volume Settings>

Trading Volume: Mode for the calculation of the lot size for each trade

Fixed Lots: Lot size for each trade if the fixed trading volume mode is chosen

Fixed Lots Per x Money: Uses "Fixed Lots" per each x amount of money in your trading account

Risk Percentage of Base Money: The lot size for each trade will be calculated so that the set percentage of the Base Money input will be lost if the inital SL is triggered

Base Money: Used for the lot calculation in the percentage mode

<Order Settings>

Wait For New High: Orders will be sent once there is a new daily high if this input is 'true'. When 'false' it will send the order immediately at the start time.

TP Percent (0 = No TP): The distance form the entry order price to the TP

SL Percent (0 = No SL): The distance form the entry order price to the SL

The percentage is based on the order open price!

<Time Settings>

Trading Start Hour: Hour for the trading start time

Trading Start Minute: Minute for the trading start time

Position Close Hour: Hour for the close time of open positions

Position Close Minute: Minute for the close time of open positions

<More Settings>

Object Color: Color of the chart objects (chart comment)

Order Comment: Commentary for every order the EA places

Magic Number: This number should be unique for every EA in your account since the EAs use it to identify their own trades

Chart Comment: Activates or deactivates the comment in the upper left corner of the chart
